Summit today

WHAT YOU DO

Summit, a Great American Insurance Group company, provides workers' compensation insurance and claims/billing services through four affiliate carriers — "Know the people who know workers' comp®."

WHO YOU SERVE

7,000+ independent agents and 31,000+ policyholders across 18 states plus D.C. — and, on the billing line, the medical providers and injured employees behind every claim.

SERVICE TODAY

A relationship-led, human-touch model: a field team in every state, and a dedicated Medical Bill Reviewer group in Lakeland, FL fielding billing calls alongside fee-schedule audits and dispute handling.

BRAND VOICE

Warm, plainspoken, specialist-not-corporate — "More access. More know-how. More commitment." Always a real person reachable.

WHERE THE VOLUME SITS

Inbound billing/claims calls on Summit's medical bills — payment status, receipt confirmation, documentation, denials and appeals — the exact drivers named in your brief.

Signals we picked up

- Summit publicly staffs a dedicated "Medical Bill Reviewer" role that fields billing calls *and* audits bills against state fee schedules — the same volume the brief wants to automate is already competing with core review work.
- "You'll always be able to speak to a real human being" is a stated brand promise — any automation has to keep a fast, visible path to a person, not bury it.
- Summit underwrites through four affiliate carriers across 18 states plus D.C. — claim identifiers and fee-schedule rules likely vary by state.
- Bill Reviewers already own "billing disputes" and SIU referrals — denial and appeal questions sit with a specialist team today, not a generalist queue.

What we couldn't see from outside

— WHERE WE'D START

Which one do we build in the lab?

One intent each, so it can be finished in a session. Pick one to prototype today — the others are parked, not discarded.

1

RECOMMENDED

USE CASE 1

Payment status inquiry

A caller already validated by the IVR (Tax ID + Bill ID) asks "has my payment gone out?" and gets a specific, dated answer — no hold, no transfer.

TOOLS	2 actions + KB
SYSTEMS	Billing platform (mock)
LAB FIT	Single read lookup

BRAND-GROUNDED

HIGHEST CALL VOLUME

2

USE CASE 2

Documentation & submission status

A provider isn't sure a bill or its supporting records arrived — the AVA names exactly what's on file, what's outstanding, and offers to trigger a reminder.

TOOLS	2 actions + KB
SYSTEMS	Document tracking (mock)
LAB FIT	Read + confirmed write

BRAND-GROUNDED

3

USE CASE 3

Denial & appeal guidance

A caller whose bill was denied hears the specific reason and appeal deadline in plain language, then hands off to Appeals with the denial code already on screen.

TOOLS	2 actions + KB
SYSTEMS	Claims & appeals (mock)
LAB FIT	Explain, then hand off

BRAND-GROUNDED

DELIVERY PROPOSED

Payment status inquiry

HAPPY PATH

- 1 The IVR has already collected and validated the caller's Tax ID and Bill ID and hands off to the AI experience with that context.
- 2 The assistant confirms the bill it's looking at (provider, date of service, amount) so the caller knows it has the right one.
- 3 It calls `get_bill_payment_status` and reads back the status — e.g. "processed on 9/18, payment issued 9/20 for \$412.50."
- 4 If the caller asks a follow-up ("what's an EOB?"), it answers from Billing Knowledge; otherwise it offers "anything else?" and closes cleanly.

WHY IT MATTERS

Payment status is the single most common billing call named in your brief — and today each one ties up a Medical Bill Reviewer who also owns fee-schedule audits and dispute work.

WOW MOMENT

A caller gets a specific, dated payment answer — no hold, no transfer — in under 30 seconds, built entirely on the identifiers the IVR already validated.

TOOLS & KNOWLEDGE — WHAT THE ASSISTANT CALLS

■ Action
 ■ Knowledge
 ■ System

 get_bill_payment_status ACTION · READ Looks up payment status, date and amount for a validated Bill ID. New Data Action · mock billing platform	 get_claim_context ACTION · READ Pulls the linked claim number, provider and date of service so the assistant confirms the right bill. New Data Action · mock claims platform	 billing_terms_knowledge KNOWLEDGE Answers "what does that mean" follow-ups — EOB, fee-schedule adjustment, remittance codes. Knowledge Fabric · new source	 Escalation SYSTEM · HAND-OFF Hands to a Medical Bill Reviewer if the caller wants to dispute the amount or the answer isn't enough. Routes to Billing queue · Bill ID, claim number, status passed
--	---	---	---

Documentation & submission status

HAPPY PATH

- The IVR hands off an already-authenticated caller (Tax ID + Bill ID / claim identifiers validated).
- The assistant calls `get_documentation_status` to check what's on file for the bill or claim.
- It reads back what's received and what's outstanding — e.g. "we have the bill and the itemized statement; we're still waiting on the treatment notes."
- If something's missing, it offers to send a reminder (with a clear "yes" first) or hands off if the caller wants to submit it another way.

WHY IT MATTERS

Documentation status is a named top call driver — and today it's a repeat call: a provider checks once, then again after resubmitting, competing with the same reviewer team's audit workload.

WOW MOMENT

The assistant doesn't just say "something's missing" — it names exactly what's outstanding, and can trigger the reminder itself after a confirmation.

TOOLS & KNOWLEDGE — WHAT THE ASSISTANT CALLS

Action
Knowledge
System

 get_documentation_status ACTION · READ Checks which required documents are on file for a bill/claim and which are outstanding. New Data Action · mock document-tracking system	 send_document_reminder ACTION · WRITE Sends a reminder of outstanding documents to the provider's file, after the caller confirms. New Data Action · mock notification service	 billing_terms_knowledge KNOWLEDGE Explains what a given document type is and why it's required — same source as use case 1. Knowledge Fabric · shared source	 Escalation SYSTEM · HAND-OFF Hands to a Medical Bill Reviewer if the caller needs to fax/upload directly or disputes what's requested. Routes to Billing queue · outstanding-document list passed
--	--	--	---

Denial & appeal guidance

HAPPY PATH

- 1 The IVR hands off the authenticated caller with the Bill ID / claim ID already validated.
- 2 The assistant calls `get_denial_reason` and explains the denial code in plain language, plus the appeal steps and deadline from Appeals Knowledge.
- 3 If a dispute is already open, it calls `get_appeal_status` and reads back where it stands.
- 4 If the caller wants to file or argue the appeal, it hands off to an Appeals specialist with the denial code and claim already on screen.

WHY IT MATTERS

Denial and appeal calls are the most emotionally charged and highest-risk of the five drivers named in your brief — getting the reason and status right, without a hold, protects both the caller and the appeals SLA.

WOW MOMENT

The caller hears the specific denial reason and appeal deadline in plain language, then reaches a specialist who already has the denial code and claim loaded — no re-explaining.

TOOLS & KNOWLEDGE — WHAT THE ASSISTANT CALLS

■ Action
 ■ Knowledge
 ■ System

`get_denial_reason` ACTION · READ

Returns the denial code and a plain-language reason for a Bill ID / claim.

New Data Action · mock claims/billing platform

`get_appeal_status` ACTION · READ

Checks whether a dispute is already open for this bill/claim and its current stage.

New Data Action · mock appeals tracking

`appeals_process_knowledge` KNOWLEDGE

Explains the appeal steps, required documentation and deadlines from Summit's dispute process.

Knowledge Fabric · new source

Escalation SYSTEM · HAND-OFF

Hands to an Appeals specialist to file or argue the appeal, with the denial code and any open dispute already loaded.

Routes to Appeals queue · full context passed
